Program Overview

The Pharmacy Residency Program (PGY1) is a twelve-month program located at the University of Minnesota Medical Center. Core and elective rotations are tailored to the resident’s interests.

At the University of Minnesota Medical Center, we balance the latest in technology and treatments with patient-centered care. As the core teaching hospital of the University of Minnesota Medical School and College of Pharmacy, our hospital is among the most respected in the nation, providing superior health care results. The Pharmacy Residency Program consists of direct patient care experiences in medicine, surgery, critical care, pediatrics, and various specialty areas. Each resident’s experience is tailored to individual interests and clinical skill development needs. The program also focuses on the development of leadership, management, and teaching skills. A publishable residency research project will be designed and completed by the resident.
