

Preparing the Infusion Bag

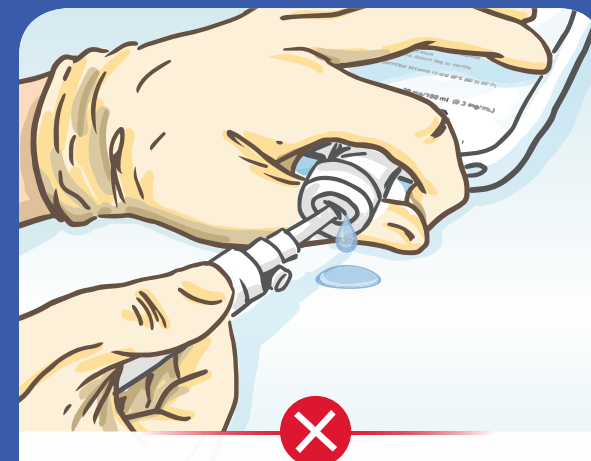

This guide demonstrates how to properly prepare the infusion bag for administering Radicava[®] (edaravone). Follow these instructions to help prevent damage to the stopper and avoid leakage of medication.

Align spike with center of stopper.

Carefully insert spike **straight into center of stopper** without twisting. Only spike once, **NOT** multiple times.

Be careful not to insert spike into stopper at an angle.

For more information on how to properly handle, store, and infuse Radicava[®], watch the Administration Guide video at Radicava.com/guide.

For questions, or to receive training on product handling and administration, call **1-844-SRCHLGT (1-844-772-4548)**.
